What's in the box:

- Cigarette lighter power cord
- 6 dBi external antenna
- Ayrstone AyrMesh Hub

1 Start Here

First, assemble and initialize the Hub per the instructions. The Hub must have checked in to your AyrMesh.com account.

2

Assemble

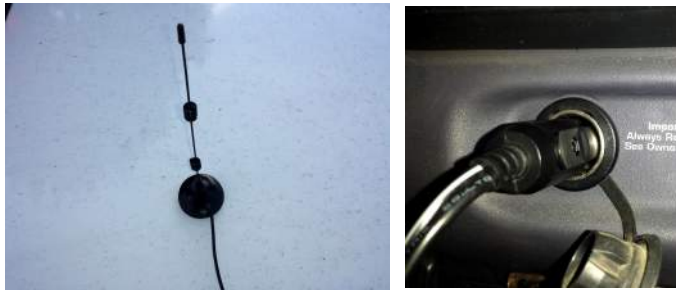

1. Remove the white antenna from the Hub and attach the cab antenna.
2. Open bottom door of the Hub and attach power cord as shown:

3

Mount

1. Place the Antenna on a ferrous metal surface outside, as high and in the clear as possible.
2. Run the antenna cable, with the hub and power cord, inside the cab.
3. Plug the power cord into a cigarette lighter (12 volt) receptacle.
4. Mount the Hub inside someplace it won't be subjected to excess shock and vibration. For instance, you can adhere the Hub to a window with 3M adhesive pads or mount it to an existing bracket with a block of foam.

Notes:

1. You'll be able to see the signal strength to the nearest Hub on the Cab Hub's lights.
2. The Hub will provide WiFi in the cab for your equipment.
3. Getting the antenna as high as possible on the vehicle and clear of any obstructions (including hoppers on combines) is vital to maximum range and effectiveness.
